

CBD

FROM PLANT IN BLOOM
TO DRINKING
INTUNE™

MAY 2018

EU certified Futura 75 hemp seeds are planted outdoors in a 200 hectare family run farm in northern Lithuania where the conditions are perfect for hemp cultivation

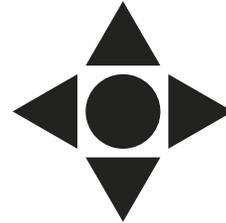

SUMMER 2018

Plants grow to 10ft and are tended to by two generations of farmers who care about using natural methods to produce top quality hemp

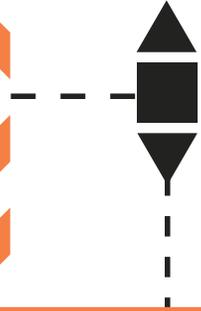

SEPTEMBER 2018

Hemp is harvested by carefully stripping the top flowers and leaves, which are dried within two hours of picking to retain the high quality CBD and nutrients

JANUARY 2019

The dried hemp flowers and leaves travel to the UK

DECEMBER 2019

Hemp is gently turned into oil using ethanol extraction and the THC is removed using a proprietary process by experts in the UK, leaving only the highest quality CBD and other good cannabinoids. The CBD particles are encased in little pockets of fat to create a liposomal 10% CBD solution

JANUARY 2020

The CBD solution is mixed with natural fruit + botanicals and spring water, gently pasteurised, carbonised and canned ready to reach people who are ready to get **INTUNE™**
